

⚡ VISUAL USER GUIDE & WALKTHROUGH

How to Use SMM PRO

A step-by-step illustrated manual for navigating clients, writing viral scripts, streamlining video editing, and getting client approvals in record time.

🌐 **App URL:** smm-pro-nayankotadiya.vercel.app

🔒 **Access:** Agency Portal

📅 **Updated:** October 2026

1. Getting Started: Access & Authentication

SMM PRO is a private agency platform. Every team member signs in using their assigned company email and secure password.

1

Open the Web Portal

Navigate to **smm-pro-nayankotadiya.vercel.app** in your browser (desktop or mobile phone).

2

Enter Your Credentials

Type your company email address and secure password provided by your agency administrator.

3

Two-Factor Authentication (If Enabled)

If you have enabled 2FA, enter the 6-digit verification code from your Google Authenticator or Microsoft Authenticator app.

Forgot Your Password? Click the *"Forgot password?"* link on the login card. If email notifications are configured, a secure 1-hour password reset link will be sent to your inbox. Administrators can also reset any team password from the Users tab.

2. The Agency Dashboard & Command Center

Upon sign-in, you are greeted by the Command Center. The dashboard dynamically personalizes metrics based on your role (Managers see company-wide throughput; Writers & Editors see assigned deadlines).

Realtime Production Metrics

Instantly track active content pieces, scripts under review, pending shooting sessions, and reels awaiting client sign-off.

Personal Task List

Your pending tasks appear right at the top. Click any task to jump directly into the script editor or media review room.

Live Team Presence

See who is actively online, away, or in Do Not Disturb (DND) mode across your production team in real time.

Deadline Calendar

View upcoming social media publishing deadlines, video delivery milestones, and festival campaigns at a glance.

3. Managing Clients & Brand Guidelines

Centralize client assets, brand guidelines, contacts, and communication history in one unified directory.

1 Adding a New Client

Click "**New client**". Enter business name, contact person, WhatsApp phone number, and social media handles.

2 Setting Brand Guidelines

Configure brand colors, fonts, tone of voice (e.g. "*Playful and energetic*" or "*Luxury and elegant*"), and USP. Writers will see these guidelines while drafting scripts.

3 Assigning Default Teams

Assign a dedicated Writer, Shooter, Editor, and SMM for each client. Every new piece of content automatically assigns to this dream team.

4. Content Pipeline & Script Writing

Track reels, carousels, and stories from ideation to final approval. SMM PRO prevents accidental overwrites with versioned script drafts (V1, V2, V3).

How Scriptwriting Works:

1 Drafting the Script

The writer enters the **Opening Hook (0–3s)**, followed by scene cards with split Dialogue and Visual Directions, ending with a Call-To-Action (CTA).

2 Internal Review

Click "**Submit for Review**". The Content Manager or SMM receives an instant notification to review the draft.

3 Handling Change Requests

If changes are requested, the writer creates Version 2 (V2). Version 1 is permanently archived for history, preventing lost revisions.

5. Client Approvals & Video Sign-Off

Eliminate back-and-forth email chains. SMM PRO generates one-click review links that clients can open on their phone without creating an account.

The Approval Experience:

One-Click Client Review Links

Click **"Share Link"** to copy the client portal URL. Send it over WhatsApp, SMS, or Email. The client views the script or streams the video immediately.

Timestamped Video Feedback

Clients and reviewers can pause the video at any exact second (e.g. 0:14) and type specific change requests. The editor sees a marker on the timeline.

Automated Shooting & Editing Tasks

When the client clicks **"Approve"** on a script, the shooter automatically gets a Shoot Task! When raw footage is uploaded, the editor automatically gets an Edit Task!

Google Drive Direct Uploads

Large 4K files stream directly to Google Drive via chunked resumable sessions. Editors never experience server upload timeouts.

6. Settings, Team Roles & Permissions

Super Administrators can customize team roles, manage users, and connect third-party cloud services.

Settings Breakdown:

Tab	Features & Configuration
Profile	Update your name, personal email, phone number, and enable Two-Factor Authentication (2FA).
Notifications	Choose which notifications you receive via In-App badges, Web Push, and Email.
Users	Add new team members, assign job titles, and deactivate accounts when employees leave.
Roles	Fine-tune permissions across 10 distinct roles (Scriptwriters, Video Editors, SMMs, Managers).
Integrations	Monitor Google Drive Cloud Storage, Email SMTP services, and AiSensy WhatsApp campaigns.

7. Quick Production Cheatsheet

Production Stage	Who Does It?	Action in SMM PRO	Next Automatic Trigger
1. Briefing	Manager / SMM	Create Content item & set deadline	Writer notified with Script Task
2. Scripting	Script Writer	Draft hook, scenes & submit V1	Manager notified to review script
3. Client Review	SMM / Client	Share review link via WhatsApp	Client approves or requests edits
4. Shoot	Shooter	Upload raw takes to Media tab	Editor notified with Editing Task
5. Edit	Video Editor	Upload V1 edit & thumbnail	SMM notified for internal QC
6. Final Approval	Client	Reviews final video on review link	SMM notified with Scheduling Task
7. Published	SMM	Schedule reel & mark Published	Content moves to 100% Complete!

Need Help or Support? Check your connection status in **Settings → Integrations**. The system status monitor keeps your backend active 24/7 with zero downtime.
